

Deep Boda

Senior DevOps Engineer · Full-Stack Engineer · Cloud & Platform Infrastructure

deepboda18@gmail.com · +91 8128769896 · linkedin.com/in/deep-boda

• PROFILE

Senior DevOps Engineer with **4+ years** running production infrastructure. At a software services company I have been the person production runs through - every client project and every company product, from the servers up to the code. Kubernetes on AWS EKS serving **millions of requests a day**. ECS microservices behind a platform with **100,000+ users**. Live market data that cannot lag. And the Node.js, Express, Next.js and React services sitting on top of all of it, which I also build. When a release has to ship - Android, iOS or macOS - I am the one who signs it and sends it.

• EDUCATION

Instrumentation & Control Engineering

Vishwakarma Government Engineering College, Chandkheda
Gujarat · 2018 - 2022 (dropped)

• CERTIFICATION

Professional Web Development

Shree Academy, Rajkot · 6-month programme
Completed Dec 2021 · Grade A · Cert. SA25773

• EXPERIENCE

Senior DevOps Engineer | Full-Stack Engineer

Feb 2022 - Present

TST Technology (TST Tech Matrix Pvt. Ltd.) · Ahmedabad, India

Own DevOps and infrastructure across the entire product portfolio - client platforms and company products alike - as sole or lead infrastructure engineer on every one of them, while leading backend development on most.

INFRASTRUCTURE & PLATFORM

- Architect and manage **Kubernetes (AWS EKS)** clusters for high-traffic consumer platforms serving millions of requests daily - cluster design, scaling, rollout strategy, resource tuning and availability.
- Run microservices infrastructure on **AWS ECS** supporting 100,000+ real user requests: service decomposition, autoscaling, task definitions, **ECR** image registries and inter-service networking.
- Keep query latency flat under sustained production load across **PostgreSQL, MySQL, Redis and Elasticsearch** - caching strategy, search indexing, replication and query tuning.
- Maintain real-time **Socket.io** infrastructure streaming live stock market data, where delivery latency directly affects product correctness.
- Run the **Linux** estate so application teams never touch a server - **Nginx** reverse proxy, SSL termination and load balancing, **PM2** process supervision, log rotation and remote execution.

CI/CD & AUTOMATION

- Build and maintain delivery pipelines across four toolchains - **Jenkins, ArgoCD, CircleCI and AWS CodeBuild / CodePipeline** - matched to how each project is hosted rather than forced into one standard.
- Cut rollback from a manual scramble to a single reverted commit by moving Kubernetes delivery to **GitOps** with ArgoCD - declarative, version-controlled and auditable.

RELEASE ENGINEERING - ANDROID, IOS, MACOS

- Own Android release cycles end to end through **Google Play Console** - signing, versioning, staged rollout and store compliance.
- Own iOS releases through **App Store Connect**, with **Xcode Cloud** pipelines handling automated builds and TestFlight distribution.
- Sign and ship **macOS** release builds - universal binaries for both Apple Silicon and Intel, Developer ID signing, notarisation and distribution.

BACKEND & FULL-STACK DELIVERY

- Lead backend development across the portfolio - **Node.js and Express** services, REST APIs, WebSocket services and PostgreSQL / MySQL schema design - writing the application code as well as running the infrastructure under it.
- Own client delivery end to end on **Next.js and React** front ends - sole technical point of contact from requirements to release, coordinating the delivery team without a separate project manager.
- Ship urgent releases and production fixes outside business hours, often in languages and codebases I did not write.

• BEYOND THE STACK

Craft	Technical SEO · web performance · AI feature integration · production debugging in unfamiliar codebases
Ownership	Incident response & on-call · client communication · leading delivery teams · mentoring junior engineers
Voice	Write publicly on LinkedIn about infrastructure and DevOps practice · English, Hindi, Gujarati

• SKILLS

Cloud	AWS - EKS, ECS, ECR, EC2, S3, RDS, ElastiCache, CloudFront, IAM, VPC · Google Cloud Platform (GCP) · Kubernetes · Docker
IaC & Deployment	Terraform · Helm · Jenkins · ArgoCD · CircleCI · AWS CodePipeline · GitOps · automated rollbacks
Observability	CloudWatch · Prometheus · Grafana · log aggregation · alerting
Linux & Servers	Linux server administration · Nginx (reverse proxy, SSL, load balancing) · PM2 · systemd · SSH · shell scripting
Development	Node.js · Express.js · REST APIs · microservices · Socket.io · WebSockets · Next.js · React.js
Databases	PostgreSQL · MySQL · Redis · Elasticsearch · schema design · caching · query tuning
Desktop & apps	Flutter · NestJS · Prisma · Play Console · App Store Connect · Xcode Cloud · macOS signing

• SELECTED WORK

Four years across client platforms and company products, most run single-handed. A sample below; names withheld.

Consumer Travel Platform Infrastructure lead

Global discovery and content site

- Run the whole **Kubernetes (EKS)** environment for a site serving millions of requests a day.
- Three connected apps - Node.js backend, Next.js site, React admin - with **Elasticsearch** powering location search and Redis keeping it fast under global traffic.

Kubernetes (EKS) · Node.js · Next.js · React · PostgreSQL · Redis · Elasticsearch · Nginx

Fintech Trading Platform Infrastructure lead

Stock market application with live market data

- Run the **AWS ECS** microservices behind a platform with 100,000+ users.
- Split across separate services: the main API, scheduled jobs, a leaderboard, and a **Socket.io service streaming live stock prices**.
- Keep it stable through market-hours traffic spikes, when load can jump within minutes.

AWS ECS · ECR · Node.js microservices · Socket.io · Redis · PostgreSQL

Anonymous India Sole engineer · my own product

Social product I own end to end - Flutter app, NestJS API, website and admin console

- Built and run all four codebases alone: **Flutter** app on both stores, **NestJS on Fastify** with **Prisma over PostgreSQL 16**, a public site and an admin console.
- **Redis 7** carries sessions, rate limiting and the **Socket.io** adapter, so realtime keeps working across more than one API container.
- Device-based auth with hashed device IDs and **RS256 JWTs** - no email or phone collected, so there is no personal data to leak.
- Multi-stage **Docker** build running non-root, composed with Postgres, Redis and **Nginx** for production.

Flutter · NestJS · Fastify · Prisma · PostgreSQL 16 · Redis 7 · Socket.io · Docker · Nginx · Firebase

AI Tools Directory Backend & infrastructure lead · company product

Search and discovery platform for AI tools

- Own it end to end - the product direction, the backend and the infrastructure.
- Built the backend in **Node.js and Express** on MySQL, with **Elasticsearch** search across the tool catalogue and Redis caching the busiest queries. Also handle the site's **SEO** and page speed.

Node.js · Express · MySQL · Redis · Elasticsearch · AWS · Nginx · Technical SEO

Digital Business Card Platform Backend lead & client delivery

Digital cards and professional networking

- Built the entire backend, and ran both the client relationship and the delivery team through to launch.
- Digital card creation and editing, **QR-based profile sharing**, and **Apple Wallet** passes via PassKit.

Node.js · Express · MySQL · Redis · Apple PassKit

Industry News Mobile Application Backend engineer

Mining sector news, regulation updates and knowledge base

- Built the backend and APIs behind the mobile app - content delivery, search, and the news feed that keeps industry professionals current on regulatory changes.

Node.js · Express · MySQL

Enterprise ERP - Renewable Energy Backend engineer

Internal ERP for a renewable energy group

- Built backend services and APIs for the core business modules, with PostgreSQL database design and Redis caching.

Node.js · Express · PostgreSQL · Redis
